

Multi Mat

Multi Mat is made up of a 1/16" thick rigid core of plastic (similar to flexible engraving stock) and has a unique rubber coating on both sides. Place one side to the engraving machine bed and the other side will hold any type of plastic or metal engraving material. Double-sided Multi Mat provides added value over any other mat. Long lasting Multi Mat is sold in several sizes to fit your laser or engraving system bed, or can be cut to any size.
